DETAILED ACTION

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Julie L. Reed (Reg. No. 35,349) on March 24, 2008.
3. The application has been amended as follows:

Please amend *claims 11, 13-14, and 44* as follow:

11. (Currently amended) A network lurking agent ~~implemented in~~ stored on a tangible computer-readable media, the network lurking agent comprising: an inquirer designed to place an inquiry in a JavaSpace persistent store to determine the availability of an user in an environment, the JavaSpace persistent store including at least one of an environment setting to indicate the availability of the user in the environment, and a user preference setting to indicate whether a device in the environment is enabled to be used; and a lurker designed to retrieve from the JavaSpace persistent store a response to the inquiry to indicate the availability of the user in the environment; and

a sender designed to send a message to the JavaSpace persistent store when the user is not available in the environment.

13. (Currently amended) A network lurking agent according to claim 11, ~~network~~ the network lurking agent further comprising a receiver designed to receive a message from the JavaSpace persistent store.

14. (Currently amended) A system ~~implemented in~~ stored on a tangible computer-readable media to support network lurking, the system comprising:
a JavaSpace persistent store;
an environment setting stored in the JavaSpace persistent store, the environment setting including at least one of the availability of a device and a user in an environment;
a user preference setting stored in the JavaSpace persistent store to indicate whether a device in the environment is enabled to be used;
a network lurking agent designed to place an inquiry in the JavaSpace persistent store to inquire about the availability of the user in the environment; and
a network receiving agent designed to determine the availability of the user in the environment responsive to the inquiry from; and
the network lurking agent designed to send a message to the JavaSpace ~~persisten-~~ persistent store when the user is not available in the environment.

44. (Currently amended) An apparatus stored on a tangible computer-readable media for using a network lurking agent to electronically lurk to an

Art Unit: 2145

environment in a system, the apparatus comprising:
means for identifying an environment of interest; and
means for placing an inquiry as to the availability of a user in the environment of interest in a JavaSpace persistent store, the JavaSpace persistent store including at least one of an environment setting to indicate the availability of the user in the environment, and a user preference setting to indicate whether a device in the environment is enabled to be used; and
means for sending a message to the JavaSpace persistent store when the user is not available in the environment.

Response to Arguments

4. The Applicants' arguments and amendments filed on January 2, 2008 have been fully considered and are persuasive.

Allowable Subject Matter

5. *Claims 11, 13-14, 16, 18-19, 27-31, and 38-45 are allowed. The claims indicated include limitations that the prior arts of record do not appear to teach or render obvious, hence they are allowed.*
6. The following is an examiner's statement of reasons for allowance:
As presented in the previous Office Action, Saulpaugh et al. (US006934755B1) discloses, *"The JavaSpaces technology package provides a distributed persistence and object exchange mechanism for code written in the Java.TM. programming language. Objects are written in entries that provide a typed grouping of relevant fields. Clients can*

perform simple operations on a JavaSpaces server to write new entries, lookup existing entries, and remove entries from the space. Objects in JavaSpaces are stored in Java Serialization Format. Server JavaSpaces provide persistent object storage replacing traditional file system storage persistence models. JavaSpaces servers provide network service connection system clients such as Jini clients access to a persistent and shareable object store" (Saulpaugh, col.14, lines 32-45). Hence, Saulpaugh teaches of the client (i.e., Applicants' inquirer writing (i.e., Applicants' placing an inquiry) in a space (e.g., JavaSpace persistent object storage) (i.e., Applicants' JavaSpace persistent store). Saulpaugh discloses, *"A consumer or appliance device with a small amount of memory may be referred to as a "small footprint device." A Compact Network Service Connection System (CNSCS) may be provided for use with small footprint network client devices (PDAs, cell phones, etc.) to locate and lease services on networked systems including servers, and to pass information to and from the located services and resources. The CNSCS may be designed specifically for use with small footprint network client devices that may be too "small" (not have enough resources such as memory) to support a system such as Jini"* (Saulpaugh, col.14, lines 46-56). Hence, Saulpaugh teaches of the consumer (i.e., Applicants' lurker) locating, leasing, and passing information to and from (i.e., Applicants' retrieving) the located services and resources (i.e., Applicants' JavaSpace persistent store).

Also presented in the previous Office Action, Theimer et al. (US005493692A) discloses, *"selectively delivering electronic messages to an identified user in a system of mobile and fixed devices, including multiple display devices and multiple users, where the identity and location of each device, display device, and user may be known to the*

system, based on the context of the system and the environment of the identified user"
(Theimer, col.4, lines 27-33).

However, the prior arts of record fail to teach or suggest individually or in combination as stated in the independent claims for *"an inquirer designed to place an inquiry in a JavaSpace persistent store to determine the availability of an user in an environment, the JavaSpace persistent store including at least one of an environment setting to indicate the availability of the user in the environment, and a user preference setting to indicate whether a device in the environment is enabled to be used; and a lurker designed to retrieve from the JavaSpace persistent store a response to the inquiry to indicate the availability of the user in the environment; and a sender designed to send a message to the JavaSpace persistent store when the user is not available in the environment."* and in combination with other limitations as set forth in the independent claims, as well as Applicants' arguments presented on pages 7-8 of the Amendment filed on January 2, 2008. In the fore mentioned amendment, the Applicants argued, *"As acknowledged in the Office Action, Saulpaugh does not teach "determine the availability of a user in an environment." See Office Action, page 5, last three lines. Saulpaugh also does not teach a JavaSpaee persistent store "including at least one of an environment setting to indicate the availability of the user in the environment, and a user preference setting to indicate whether a device in the environment is enabled to be used."* Saulpaugh merely teaches a generic JavaSpace technology, as described in Col. 14, lines 32-45 of the disclosure, which is not repeated here." (pg.7).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany

Art Unit: 2145

the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
